Amendments to the Claims

- 1. (Currently Amended) An isolated proteinaceous molecule having canine PTH1 activity, wherein said proteinaceous molecule comprises an amino acid sequence of SEQ ID NO:2 SEQ ID NO:6, or an amino acid sequence of SEQ ID NO:2 SEQ ID NO:6 with one or more conservative substitutions therein.
- 2. (Original) An isolated proteinaceous molecule according to claim 1, wherein said amino acid sequence has zero to three conservative substitutions therein.
- 3. (Currently Amended) An isolated proteinaceous molecule according to claim 1, wherein said amino acid sequence comprises an amino acid sequence of SEQ ID NO:6.
- 4. (Original) An isolated DNA molecule encoding a proteinaceous molecule according to claim 1.
- 5. (Original) An isolated DNA molecule encoding a proteinaceous molecule according to claim 3.
- 6. (Original) A recombinant expression vector comprising a DNA molecule according to claim 4.
- 7. (Original) A cell transformed by an expression vector according to claim 6.
- 8. (Original) A cell according to claim 7, wherein said cell is that of a prokaryote.

- 9. (Original) A cell according to claim 7, wherein said cell is that of a eukaryote.
 - 10. (Original) A cell according to claim 9, wherein said eukaryote is yeast.
- 11. (Original) A cell according to claim 9, wherein said eukaryote is a mammal.
 - 12. (Original) A cell according to claim 11, which is a CHO cell.
- 13. (Original) A method of producing a proteinaceous molecule having an activity of canine PTH1, which comprises culturing a cell according to claim 7 for a time sufficient to produce said proteinaceous molecule.
- 14. (Original) A pharmaceutical composition comprising the proteinaceous molecule according to claim 1 and a pharmaceutically acceptable carrier therefor.
- 15. (Original) A pharmaceutical composition comprising the proteinaceous molecule according to claim 3 and a pharmaceutically acceptable carrier therefor.
- 16. (Original) A specific binding partner that selectively binds to the proteinaceous molecule according to claim 1.
- 17. (Original) A method of discovering ligands for the canine PTH1 protein, said method comprising the steps of:
 - a) combining a test substance with the proteinaceous molecule according to claim 1;
 - b) measuring specific binding between said test substance and said proteinaceous molecule; and
 - c) classifying as a ligand said test substance if it binds to said proteinaceous molecule.

- 18. (Original) A method of discovering modulators of canine PTH1 protein activity, said method comprising the steps of:
 - a) combining a test substance with the proteinaceous molecule according to claim 1;
 - b) measuring the activity of said proteinaceous molecule in the presence and absence of said test substance and; and
 - c) classifying said test substance as a modulator of canine PTH1 activity if it modulates the activity of said proteinaceous molecule.
